Typing to talk is quick and simple with the new KeyboardCommunicator KC200 from Afforda Speech. Featuring the industry standard DECTalk text-to-speech synthesizer, it gives users a flexible and a high quality speech output. Because the KC200 KeyboardCommunicator is designed to be compatible with the industry standard PS/2 keyboard interface, you can also use your own PS/2 compatible keyboards such as large-button keyboards, ergonomics keyboards, custom keyboards with key guards and even wireless keyboards!

... and it's also an **Augmentative Communication Device**

Attach a keypad to the KeyboardCommunicator and use it as a symbol Communication Board!

- Each button plays back a different message
- Easy to setup, just type in and store the text you want spoken for each button
- Put graphic icons on the key tops for ease of use
