What a great invention! It's tailored to fit the AlphaSmart and transforms it into a keyboard-based voice-output communication device. Our district is always looking into ways to maximize resources and this fits the bill! While not having all the features of a high-end device, the Smartspeaker is entirely adequate for those students who can type, but need a "voice" to carry on a conversation. For those students just learning keyboard skills, there's also an easy way to "speak" previously stored messages. One of the best features is the ability to change voices, rate and volume.

Thanks for letting us "affordaspeech"!
